Energy Storage
Clean Energy Career Pathways Catalog

Over 300 job descriptions for technical and specialty jobs in clean energy

Created for job-seekers, hiring managers, the existing workforce, and the public, ACP’s Clean Energy Career Pathways Catalog presents over 300 job descriptions for technical and specialty jobs within the clean energy industry.

This catalog shows the upward mobility and opportunities that exist within the industry, alongside highlighting the skills and requirements necessary to work in these positions. The aim is to provide a better understanding of how existing transferrable skills could be applied to clean energy jobs or what a career progression within the workforce could look like.

This massive effort is meant to provide workers in other energy industries, veterans, and workers in underrepresented communities a better idea of the jobs available in clean energy, as well as support the industry with recruiting and retention.

Energy Storage Career Pathways Catalog
This sector-specific catalog presents job descriptions in the Energy Storage sector. For jobs within all sectors, download the full PDF.

If you have questions about the catalog, please email workforcedev@cleannpower.org.
Clean Energy Occupations can be looked at across Clean Energy Sectors, Industry Segments, Industry Sub Segments, and Occupational Groups & Job Families. The catalog is organized by the hierarchy and groups represented here:
**Explanation of Career Maps**

Each catalog includes an interactive Career Map that illustrates potential pathways for career growth within the Sector and within five specific Industry Segments.

On the Career Map, each occupation is represented by a clickable dot. Each sector’s Career Map contains three Career Levels:

- Entry Level
- Mid-Level
- Advanced

Dots placed in vertical lines or nearby spaces up through the career levels represent the career progression in a particular field or Industry segment.

**Note:** The vertical paths are not the only potential career options from any given occupation, since those who acquire further education and experience may also make cross-industry segment and sector moves. The more typical career moves from each occupation are outlined on each Occupation Description page.

Manager, Energy Storage Development

DESCRIPTION
Implement project origination and development tasks, including negotiation of site control agreements, managing site surveys and due diligence, securing land use and environmental approvals, and advancing projects through the interconnection process. Additional tasks may include obtaining project easements and assisting with energy marketing. Solicit and procure deliverables. Ensure deliverables are completed on-time and within budget and mentor other developers in the same. Ensure project financial models are kept up to date and help manage the internal financial approval process for assigned development projects. Conduct risk analyses / assessments and recommend mitigation measures. Coordinate with internal teams regarding marketing, engineering, legal, procurement and construction.

KNOWLEDGE/SKILLS
Analytical skills, conducting financial and risk analyses, negotiating, contracting, leading & directing people

REQUIREMENTS
Education/Training
Bachelor’s degree in engineering, business/ economics, or energy related field. Advanced degree a plus.

Experience
Several years work experience preferably applicable to renewable energy, ideally energy storage.

POSITION REPORTS TO
Director, Energy Storage, Director of Development, or VP, Energy Storage

CAREER PATH MOVES FROM THIS ROLE
Director of Storage Operations or Engineering or Construction or Project Manager on other green energy systems (i.e. Solar), VP Energy Storage
Mechanical Engineer
Design Engineer, Product Engineer, Equipment Engineer

DESCRIPTION
Design, develop, analyze and test Storage equipment and products. Design mechanical and electromechanical systems and components for Storage projects. Develop technical engineering drawings and models. Verify and check project layouts and drawings. Outline materials needed based on engineering and quality standards. Create new and improve upon existing energy Storage designs to improve efficiency and reliability, and to reduce costs.

KNOWLEDGE/SKILLS
Project management, design for manufacturability (DFM) principles, mechanical and electromechanical assemblies & mechanisms, Energy Storage, 3D cad modeling and drawing creation using SolidWorks software, product design, quality control.
Sales Solution Engineer

DESCRIPTION
Present storage solutions in a compelling and value-based approach to prospects and customers as part of the sales process. Uncover business requirements, prescribe comprehensive solutions, and demonstrate the solutions that will address the requirements. Partner with account executives to provide customer-facing consultation. Maintain technical understanding of company’s storage solutions. Develop expertise in vertical market and knowledge of competitors in the market. May lead discovery and initial requirements gathering sessions with customers and prospects, translating key needs into solution opportunities. Recommend products and services to match customer requirements. Respond to functional and technical questions, RFPs, etc.

KNOWLEDGE/SKILLS
Translating technical capabilities into business benefits, translating customer requirements and needs into solutions, presenting

REQUIREMENTS
Education/Training
Bachelor’s degree in engineering or other field related to role.

Experience
Experience with energy storage systems, developing and delivering presentations to executives and customers.

POSITION REPORTS TO
Solutions Engineering Manager, Sales Manager or Director

CAREER PATH MOVES FROM THIS ROLE
Engineering Manager or Sales Manager or Director
Site Acquisition Manager
Land Acquisition Manager

DESCRIPTION
This is the more senior level of Site Acquisition Specialist. Secure optimal sites for energy storage. Identify, structure, negotiate and execute real estate transactions with a wide range of property owners and third parties for the development of energy storage assets. Conduct landowner outreach and establish relationships with a list of targeted landowners. Negotiate terms on all facets of site acquisition, including letters of intent, options, leases, purchase agreements, and easements. Draft real estate documents. Work with outside consultants land agents, counsel, and specialists. Manage & coordinate multiple projects. Educate landowners on energy storage business. Manage land/site acquisition specialists.

KNOWLEDGE/SKILLS
Real estate transactions and title matters, renewable energy, land use, land (ALTA) surveys, GIS and mapping software

REQUIREMENTS
Education/Training
BA/BS degree in energy or real estate; Master's degree a plus.

Experience
3+ years' experience of real estate acquisition and / or development experience, ideally with renewable energy experience.

Credentialing Required/Optional
Real estate credentials helpful.

POSITION REPORTS TO
Director, Energy Storage, Director of Development, or VP, Energy Storage

CAREER PATH MOVES FROM THIS ROLE
Project Manager Energy Storage, Operations Director
Site Acquisition Specialist
Land Acquisition Specialist, Land Agent, Land Acquisition Associate

DESCRIPTION
Assist in obtaining land for energy storage projects. Administer land after it has been purchased or leased. Work with various engineers, scientists, attorneys, developers, permitting specialists, landowners, local governments and community organizations to ensure storage project is constructed and operational. Design and implement land acquisition strategies and plans for development of new sites. Assist developers/owners in projects by providing land options. Conduct research on county building codes and landowner information. Coordinate meetings, develop relationships, and negotiate purchase or lease contracts with owners.

KNOWLEDGE/SKILLS

REQUIREMENTS

Education/Training
Bachelor’s degree required; Graduate degree preferred. Business, real estate law, engineering or related.

Experience
Real estate or land acquisition experience required.

Credentialing Required/Optional
Real estate license preferable. Notary license desirable.

POSITION REPORTS TO
Purchasing Manager

CAREER PATH MOVES FROM THIS ROLE
Purchasing Manager, Asset Manager
Planner—Renewable Energy

DESCRIPTION
Responsible for assessment and permitting of renewable energy facilities and associated storage and transmission infrastructure. Prepare proposals and provide direction for the development of environmental impact analysis documents, related technical studies, mitigation monitoring, exemptions/exclusions, and discretionary permit applications. Manage projects. Provide leadership for staff. Review field surveys and reports, cultural resources and geotechnical surveys and reports, air quality reports, wetland delineations (where applicable). Oversee preparation of environmental permit applications with various federal, state, and local agencies for a variety of project types/sizes.

KNOWLEDGE/SKILLS
NEPA practices and regulations. Environmental planning. Analysis of data/information, synthesis, and conclusion development. Writing various reports and documents. Constraint analysis. Developing mitigation measures. Reading and interpreting complex documents. Communication with varied groups, including leading meetings and presentations. Proficiency with MS Office suite (e.g., Microsoft Word, Microsoft Teams, Microsoft Project, Adobe Acrobat, Excel). Federal, state, and county permitting processes and applications. Federal and state habitat conservation planning programs.

REQUIREMENTS

Education/Training
Bachelor’s degree in environmental science or related field required. Masters degree preferred. Training / education in a technical field such as hazardous materials, biological resources or environmental law a plus.

Experience
Minimum 7 years of applicable professional experience. Minimum 5 years of demonstrated project lead experience. Minimum 3 years in renewable or traditional energy. Experience with environmental permitting for large, utility-scale solar, wind energy or storage or transmission infrastructure projects.

Credentialing Required/Optional
Industry-specific training (specialized field surveys methods, NEPA courses), certifications (e.g., PWS, CWB®, AICP, HAZWOPER), or species-specific handling permits a plus.

POSITION REPORTS TO
Director Environmental Assessment, Permitting & Compliance

CAREER PATH MOVES FROM THIS ROLE
Director Environmental Assessment, Permitting & Compliance
Strategic Procurement Manager

DESCRIPTION
Lead and support the development of strategy for and the procurement of the key components that comprise projects and products, including energy storage solutions, tracking systems and other key technologies with a focus on energy storage. Perform technology evaluation that considers potential customers, financial structures, and strategic advantages; build specifications with the engineering teams; Collaborate on project development and implementation. Maintain supplier relationships; conduct assessments of suppliers, maintain pricing roadmaps. Procure key components and create contracts with suppliers. Lead competitive RFP processes and manage contracting process. Interface with legal, development, engineering and construction on scope, specifications, testing, etc. Support projects and ongoing supplier management.

KNOWLEDGE/SKILLS
Knowledge of renewable energy industry, negotiations, contracting, quantitative and qualitative analysis

REQUIREMENTS
Education/Training
Bachelor’s degree. MBA or MS degree preferred.

Experience
At least 3 years experience in the energy field (storage preferred); experience in negotiations and analysis.

POSITION REPORTS TO
Director, Energy Storage

CAREER PATH MOVES FROM THIS ROLE
Director of Storage Operations or Engineering or Construction or Project Manager on other green energy systems (i.e. Solar)
## Associate Technician

### Mechanical Assistant

#### DESCRIPTION
Perform all preventive, scheduled, and unscheduled maintenance on mechanical equipment in safe & efficient manner. Read and follow work procedures, operation and maintenance instructions / manuals, blueprints and schematics. Provide assistance in troubleshooting, installing, replacing, and repairing storage equipment and components. (This position is not qualified to independently perform Electrical technician work). Align machines and equipment, dismantle and move machinery / equipment. Perform work according to EHS practices, including LOTO procedures. Complete required reports and paperwork, including inputting information into a computer / device.

#### KNOWLEDGE/SKILLS
Mechanical / technical general skills. Strong mechanical aptitude. Comfortable working in confined spaces. Able to lift repeated weight up to 50 lbs.

---

### REQUIREMENTS

#### Education/Training
High school diploma. Valid driver’s license.

#### Experience
0-1 year of relevant experience. Industrial maintenance desired. Operations and upgrade of equipment. Hands on mechanical position in industrial environment desired. Using hand held and power tools including mechanical troubleshooting equipment.

### POSITION REPORTS TO

- Electrical Technician
- Field Technician
- Maintenance or Operations Manager

### CAREER PATH MOVES FROM THIS ROLE

- Mechanical Technician
- Other Technician Roles
Energy Storage Technician
Field Service Specialist, Mechanical Technician

DESCRIPTION
Perform all preventive, scheduled, and unscheduled maintenance on mechanical equipment in safe & efficient manner. Read and follow work procedures, operation and maintenance instructions / manuals, blueprints and schematics. Troubleshoot, install, replace and repair storage equipment and components. Troubleshoot complicated mechanical, hydraulic, and electrical problems and performance maintenance with storage equipment / facility. Perform some diagnostic/troubleshooting electrical and mechanical analysis and equipment inspections. Write reports and procedures. Assist with installation and commissioning. Provide training and direction to others. Follow Environmental, Health & Safety (EHS) procedures.

KNOWLEDGE/SKILLS
SCADA or storage management system; Mechanical, hydraulic, and electrical knowledge for troubleshooting, repair, installation, commissioning; EHS practices; PCAT and FCAT commissioning, electrical test equipment; electrical and mechanical schematics, project management, team leadership, using hand tools.

REQUIREMENTS

Education/Training
Depending on Level: HS Diploma or GED, Associates degree or diploma in electrical or mechanical field, technician or technical field.

Experience
Depending on level of Technician (I-IV), 2+ to 4+ years experience in construction, installation or commissioning., mechanical engineering helpful; maintenance experience. Preferably experience working around all levels of voltage.

Credentialing Required/Optional
Certified to perform commissioning on SCADA or storage management system.

POSITION REPORTS TO
Engineer or Construction / Project / Commissioning Manager

CAREER PATH MOVES FROM THIS ROLE
Other Technician roles. Energy Storage Engineer, Construction Manager / Project Manager, Commissioning Manager
High Voltage Technician

DESCRIPTION
Provide electrical, high voltage (HV), and substation emergency response to wind farms, solar facilities, transmission or storage relay, substation or powerhouse. Lead maintenance, service, and repair of HV assets in conjunction with other technicians and HV Reliability Engineers. Perform testing, repairs, switching, and construction activities. Provide technical expertise for commissioning start-up, and initial operating activities.

KNOWLEDGE/SKILLS
Medium & HV substation electrical equipment, systems, design, AC/DC hi-pots, low res ohm meters, communication systems (SCADA), OTO & LOTO procedures.

REQUIREMENTS
Education/Training
HS Diploma or equivalent, plus continuing education in electro-mechanical field. Valid driver’s license.

Experience
5+ years relevant technical experience, experience in power generation or distribution preferred.

Credentialing Required/Optional
Qualifications required to operate HV equipment.

POSITION REPORTS TO
Regional Operations Manager, High Voltage Reliability Engineer

CAREER PATH MOVES FROM THIS ROLE
Storage Technician, High Voltage Reliability Engineer / Specialist, Storage HV Technician
Operations Specialist I

DESCRIPTION
Support day to day Reporting, Performance, and Monitoring (RPM) Center Storage activities, acting as the on-shift Operations Specialist for assets in the portfolio. Involved in monitoring of plant and system processes. Operate electrical and SCADA systems. Monitor critical elements in a complex and regulated system. Implement real-time actions to ensure the stable and reliable operation. Comply with applicable NERC Reliability Standards and regional rules and tariffs. Monitor and analyze available market information to identify dispatching and trading opportunities. Analyze and evaluate energy transactions.

KNOWLEDGE/SKILLS
Storage technician knowledge. Plant and system processes, Operation of electrical and SCADA systems, Functional systems interactions.

REQUIREMENTS

Education/Training
Bachelor’s degree or formal operations apprenticeship training or equivalent preferred.

Experience
Two years’ experience in Operations or in a Storage Technician Role is preferred. Competent technical knowledge of plant and system processes, and experience in operating electrical and SCADA systems.

Credentialing Required/Optional
Must obtain NERC RC certification within 12-months.

POSITION REPORTS TO
Operations Manager or RPM Manager

CAREER PATH MOVES FROM THIS ROLE
Operations Specialist II
# Safety Manager I

## DESCRIPTION
Participate in planning and implementing safety programs for projects while ensuring compliance with federal, state and corporate environmental, health and safety regulations. Develop specific HSE programs & procedures through interface and teamwork with management/supervisory personnel. Maintain Accountability Programs on all projects for safety-related issues and work with supervision to ensure uniform application of safety related discipline. Serve as a mentor to HSE professionals. May be the lead safety manager on a small project. Coordinate & present safety training to support company & client requirements. Participate in EHS project risk assessments. Assist with conducting accident, near miss, & damage investigations with Root Cause Analysis. With oversight, develop & monitor EHS performance, preventive & corrective action plans.

## KNOWLEDGE/SKILLS
- MSHA/OSHA regulations and hazard recognition, record keeping and injury management. Environmental, Health & Safety policies and procedures.

### REQUIREMENTS

#### Education/Training
High school diploma or GED.

#### Experience
Minimum of 1 year of construction safety management experience. Demonstrated ability to provide a high level of safety leadership to both management and technicians.

#### Credentialing Required/Optional
- Certified Hygiene Safety Technician (CHST) preferred. CPR/First Aid certification.

### POSITION REPORTS TO
EHS Senior Leadership or a Group/Senior Safety Manager

### CAREER PATH MOVES FROM THIS ROLE
Senior Safety Manager, Safety Manager II

### CAREER PATH MOVES TO THIS ROLE
Safety & Incident Inspectors, Safety Manager II, EHS Senior Leadership, Group/Senior Safety Manager
Technology Specialist

DESCRIPTION
Provide technical expertise regarding storage technology solutions to solve technical challenges. Troubleshoot hardware and software issues. Work with infrastructure and application support internally and external vendors to resolve technical issues, perform installations, decommissioning, repairs, upgrades. Maintain technical understanding of company’s storage solutions.

KNOWLEDGE/SKILLS
Technical knowledge, energy storage technology, hardware and software applications / systems, diagnosing issues

REQUIREMENTS

Education/Training
HS Diploma or equivalent, plus continuing education in electro-mechanical field. Valid driver’s license.

Experience
Some experience in renewable energy, specifically storage technology.

POSITION REPORTS TO
Energy Storage Engineer, Energy Storage Systems Engineer

CAREER PATH MOVES FROM THIS ROLE
Energy Storage Engineer, Energy Storage Systems Engineer
**Analyst**

**DESCRIPTION**
Model and monitor storage facilities. Maximize revenue and efficiency for energy storage customers by identifying and initiating appropriate responses for conditions, opportunities, and issues related to safety, production, and performance. Collect daily production data and perform energy simulation analyses. Additionally, utilize technical knowledge of storage systems and support and serve the production team, field technical operations and asset management to address all storage related production issues. Assist in the technical evaluation of proposals. Build and manage dashboards with performance and operations data. Assist in the development of forecasts and pro-forma analyses.

**KNOWLEDGE/SKILLS**
Knowledge of field applications is needed to translate the data to usable results and procedures for development and operations teams. Database structures, engineering calculations. Analyzing equipment performance and identifying performance issues using software tools. Performing calculations and collecting and analyzing data.

**REQUIREMENTS**

**Education/Training**
Bachelor’s degree in engineering or technical discipline; Masters degree preferred.

**Experience**
3+ years in asset management and/or field operations. 3+ years experience in energy storage. Data analytics and statistics, building models. Experience working with large data sets, conducting root cause analyses, and visualizing data in a variety of formats for identifying trends and outliers.

**Credentialing Required/Optional**
PE (Professional Engineer) a plus.

**POSITION REPORTS TO**
Energy Project Manager, Operations Manager or Director

**CAREER PATH MOVES FROM THIS ROLE**
Project Manager Energy Storage, Operations Director, Construction Manager; Energy Storage Optimization Engineer
Engineer—Energy Storage

DESCRIPTION
Provide engineering expertise and general onsite support related to battery storage. Ensure successful operation strategy. Perform troubleshooting, fault analysis, and investigation. Develop, maintain, and update work instructions and procedures. Lead and support technical root cause analysis for component and equipment failures. Analyze performance data related to battery storage. Contribute to design specification, optimization, and costing of energy storage facilities. Assist with any SCADA related collaboration with engineering. Support the evaluation of new equipment components and other direct cost reduction initiatives. Define standard engineering deliverables for project teams. Develop and maintain energy storage equipment standards to be used by engineering team.

KNOWLEDGE/SKILLS
System design expanding technical knowledge, Health and safety, Creating written instruction. Designing and modeling renewable energy and energy storage. Ability to physically move around and work on equipment, and lift and carry up to 50 lbs.

REQUIREMENTS
Education/Training
Higher education or Bachelor’s degree in relevant subject.

Experience
3-5 years related technical experience with battery storage.

Credentialing Required/Optional
PE (Professional Engineer) a plus.

POSITION REPORTS TO
Director of Operations

CAREER PATH MOVES FROM THIS ROLE
Operations Manager / Engineering Manager / Construction Manager / Project Manager, Director of Operations
High Voltage Reliability Engineer / Specialist

DESCRIPTION
Provide front-line High Voltage (HV) Electrical Equipment support to wind farms, solar facilities, transmission or storage relay, substation or powerhouse. Serve as organization's subject matter expert on HV concerns. Provide support regarding electrical design, engineering, testing and construction. Support and coordinate commissioning, start-up and initial operation. Optimize scheduled maintenance with fuel resources, weather and reactive maintenance activities. Support and coordinate electrical equipment inventory, maintenance, etc. Perform equipment inspections and ensure compliance with applicable NERC standards. Train and supervise subordinates.

KNOWLEDGE/SKILLS
Safe work practices, HV equipment operation, maintenance, medium & high voltage substation equipment, relay protection systems, collection systems, transmission designs & operations, power generation and distribution, HV field service, MS office, project software, specifications / drawings / documents related to engineering and construction, schematics, wiring diagrams industry standards and codes including: Institute of Electronic Engineers (IEEE), National Electrical Safety Code (NESC) and ANSI (American National Standards Institute). Ability to travel to different sites.

Requirements

Education/Training
Bachelor’s degree in Electrical Engineering or equivalent in training & experience. Valid driver's license.

Experience
5+ years relevant technical experience. Expert knowledge of medium & high voltage substation electrical equipment. Experience with power generation or distribution, establishing HV field service. Proficient in MS office, project software, relay and protection fundamentals, operation of capacitor banks, circuit breakers, and disconnect switches. LOTO and OTO procedures software suite preferred.

Credentialing Required/Optional
Qualifications required to operate HV equipment.

Position Reports To
High Voltage Operations Manager

Career Path Moves From This Role
HV Operations Manager, Operations Manager, Construction / Project Manager
Maintenance Supervisor

**DESCRIPTION**
Supervise and perform corrective, preventive, and emergency maintenance and operations for Storage systems and associated equipment. Support the site / facility manager in operating the site. May provide first line of supervision for technicians. Oversee safe operation and performance of mechanical, electrical and hydraulic maintenance activities. Schedule all maintenance, replacement and inspection. Ensure the troubleshooting of failures, faults, and problems; interpret fault reports, and implement corrective actions. Write reports. Read blueprints and schematics. Assist with high-voltage system maintenance and repair. Develop strategy for improved maintenance diagnostics and operation. Lead and train more junior maintenance personnel. Interact with customers. Ensure all health and safety and operating procedures are followed.

**KNOWLEDGE/SKILLS**
Diagnosing equipment problems. Electricity, Mechanical, Hydraulics, and Environmental, Health and Safety Fundamentals. Mechanical and electronic testing equipment. Use of power and hydraulic tools. Working around low, medium and high voltage. Reading and interpreting operating and maintenance instructions, and procedure manuals. Writing routine reports and correspondence. Developing strategy. Troubleshooting involving complex variables. Leading and training crews. Supervision of others and site management. Customer service, public relations.

**REQUIREMENTS**

**Education/Training**
Technical School Diploma preferred or equivalent combination of education and experience.
High school diploma or GED required.

**Experience**
3 years’ experience in the operation of commercial Storage facilities or 5 years’ equivalent experience in instrumentation & controls, MV/HV (medium voltage/high voltage) electrical work. Qualified to perform all routine and emergency operations at an electric generation facility and HV Switchyard. Experience working with plant systems and computerized maintenance management systems.

**Credentialing Required/Optional**
Journeyman electrician preferred and NESC.

**POSITION REPORTS TO**
Maintenance Manager, Project Manager

**CAREER PATH MOVES FROM THIS ROLE**
Maintenance Manager
Operations Specialist II

DESCRIPTION
Support day to day Reporting, Performance, and Monitoring (RPM) Center Storage activities, acting as the on-shift Operations Specialist for assets in the portfolio. Involved in monitoring of plant and system processes. Operate electrical and SCADA systems. Monitor critical elements in a complex and regulated system. Implement real-time actions to ensure the stable and reliable operation. Comply with applicable NERC Reliability Standards and regional rules and tariffs. Monitor and analyze available market information to identify dispatching and trading opportunities. Analyze and evaluate energy transactions.

KNOWLEDGE/SKILLS
Storage technician knowledge. Plant and system processes, Operation of electrical and SCADA systems, Functional systems interactions.

REQUIREMENTS
Education/Training
Bachelor’s degree or formal operations apprenticeship training or equivalent preferred.

Experience
3-4 years’ experience in Operations or in a Storage Technician Role is preferred. Competent technical knowledge of plant and system processes, and experience in operating electrical and SCADA systems.

Credentialing Required/Optional
Must obtain NERC RC certification within 12-months.

POSITION REPORTS TO
Operations Manager or RPM Manager

CAREER PATH MOVES FROM THIS ROLE
Operations Manager or RPM Manager
Safety Consultant

DESCRIPTION
Support safety testing and technical due diligence. Support a range of research, modeling, and review projects ranging from technology hardware, code, and safety reviews. Collaborate on industry engagements regarding energy storage across various industries. Provide expertise and process improvement to destructive and performance testing, working with experts in fire, explosion, performance risk analysis, and interpreting fire and safety codes for customers. Provide input on strategic planning, marketing, and new business development.

KNOWLEDGE/SKILLS
Construction and operation of energy storage systems, energy storage codes and standards, modeling or simulating energy storage operations, interpret & direct CFD models as they relate to fire safety risk. Experience with NFPA, UL, IEC, IEEE, and ASTM standards as they relate to energy storage safety. Industry best practices, guidelines and standards.

REQUIREMENTS
Education/Training
Bachelor’s degree in engineering, environmental sciences, technical or related field. Advanced degree in engineering or related field preferrable.

Experience
Minimum 2 years experience in energy storage, fire safety, safety consulting. Ideally business development experience or involvement in industry groups or committees, trade journals, conference presentations. Ideally experience in modeling or simulating energy storage operations.

Credentialing Required/Optional
CSP (Certified Safety Professional), NDT (non-destructive testing) certification and/or PE (Professional Engineer) certification a plus.

POSITION REPORTS TO
Operations Manager, Construction Manager or Engineering Manager

CAREER PATH MOVES FROM THIS ROLE
Operations Manager, Construction Manager, Engineering Manager or Development Manager
Safety Manager II

DESCRIPTION
Plan, organize and implement the company safety programs. Demonstrate management skills and the ability to manage all aspects of a project safety program. Develop project specific HSE programs and procedures through interface and teamwork with management/supervisory personnel. Maintain Accountability Programs on all projects for safety-related issues and work with supervision to ensure uniform application of safety related discipline. Be the lead safety manager on a project. Serve as a mentor and manage other direct report safety/EHS managers. Demonstrate skills of a Safety Manager III by progressively increasing responsibility and authority. Develop and facilitate EHS project risk assessments. Lead and conduct accident, near miss, and damage investigations with Root Cause Analysis. Develop & monitor EHS performance, preventive & corrective action plans.

KNOWLEDGE/SKILLS

REQUIREMENTS
Education/Training
Associates / Bachelor’s degree

Experience
Minimum of 3 years of construction experience managing safety. Demonstrated ability to provide a high level of safety leadership to both management and technicians.

Credentialing Required/Optional
Certified Hygiene Safety Technician (CHST) preferred. Or other BCSP certification preferred. Certification as an OSHA, MSHA. CPR/First Aid instructor preferred.

POSITION REPORTS TO
EHS Senior Leadership

CAREER PATH MOVES FROM THIS ROLE
EHS Senior Leadership
Systems Engineer

DESCRIPTION
Support the storage infrastructure—installation, deployment, performance testing, upgrades, problem diagnosis, and troubleshooting. Support the computing, networking, and storage systems (electro-chemical, thermal and/or mechanical). Apply systems analysis techniques and procedures, including consulting with users / customers to determine hardware, software or system functional specifications. Design, develop, document, analyze, create, test, optimize or modify storage systems or programs, including prototypes, based on and related to user or system design specifications. Diagnose system operational problems. Participate in on-call rotation providing 24-hour, 7 day support and off-hours maintenance. Coordinate with vendors to resolve hardware and software problems. Serve as a subject matter expert for storage resources. Lead system design, facility integration, deployment, upgrades, issues resolution, and decommissioning.

KNOWLEDGE/SKILLS
Identifying requirements and matching to energy storage solutions; Installation, operation and maintenance of storage systems & facility, managing priorities and people.

REQUIREMENTS
Education/Training
Bachelor’s degree in engineering, technical field, or storage system technology.

Experience
3+ years experience in renewable energy, preferrable energy storage technologies.

Credentialing Required/Optional
PE (Professional Engineer) a plus.

POSITION REPORTS TO
Energy Storage Systems Manager, Systems Engineering Manager

CAREER PATH MOVES FROM THIS ROLE
Energy Storage Systems Manager, Engineering Manager, Operations Manager
Asset Manager
Senior Financial Analyst

DESCRIPTION
Manage the range of assets for the business, from a financial standpoint. Prepare financial statements, forecasts, and reports. Manage the project financing process for various projects. Obtain construction loans, ensure development of equity, and secure debt vehicles. Manage project debts. Assist CFO and CEO with developing expansion or acquisition opportunities based on knowledge of the energy storage market. Manage financial close process. Ensure that business is in compliance and legal requirements are met. Provide supervision to other financial staff. Analyze and propose ways for the company to reduce costs. Assist management in making financial decisions. Perform data analysis and advise senior management on maximizing business profits and reducing costs.

KNOWLEDGE/SKILLS

REQUIREMENTS
Education/Training
Bachelor’s degree required; Graduate degree often required.

Experience
5-10 years of experience in another business or financial occupation, such as an accountant, financial analyst or auditor.

POSITION REPORTS TO
Finance Manager or Director, or CFO

CAREER PATH MOVES FROM THIS ROLE
Finance Manager
Director, Energy Storage Systems

DESCRIPTION
Spearhead and oversee the development, implementation and closing of all activities necessary for energy storage system. Lead negotiations with stakeholders in new energy storage projects including, independent system operators, consultants and permitting and regulatory agencies. This includes project conceptualization, management of design engineering, development fatal flaw analysis, equipment and vendor selection analysis, vendor negotiation and management, construction management, and operations and maintenance planning and analysis. This position will collaborate with an interdisciplinary team involved in all stages of project development and commercialization. Lead teams in proposal development and management presentations. Support existing project expansions and new generation development. Ensure EHS in engineering and design. Manage all functional areas through first level of management including HR, accounting, budgeting. Serve as advisor to senior management.

KNOWLEDGE/SKILLS
Contracting, technical analysis, directing all aspects of energy area—technical and support, engineering requirements, energy storage, business development, project development, construction, operations & maintenance. National Electric Code.

REQUIREMENTS
Education/Training
BS degree in engineering; masters or PhD a plus.

Experience
Experience in renewable energy systems; minimum 5+ years project execution experience including deal and contract negotiation. Energy storage solutions experience.

Credentialing Required/Optional
Ideally PE (Professional Engineer) registration.

POSITION REPORTS TO
COO Chief Operating Officer or VP Operations, Engineering, Projects or Construction

CAREER PATH MOVES FROM THIS ROLE
VP Operations, Engineering, Projects or Construction
Director, Operations & Maintenance
Director O&M

DESCRIPTION
Manage overall strategic and operational activities for O&M projects in energy storage. Manage scheduled and unscheduled maintenance work, out of scope transactional work and inspection work. Monitor subcontractors with regard to crane, mechanical, electrical and other work. Develop mid-term and long-term strategic plans for all O&M site operations. Include business plans, hiring strategies, development of strategic capabilities, and contributions to new site setup.

KNOWLEDGE/SKILLS
Strong business acumen, ability to run O&M projects as a business. Highly familiar with site management structure in the US for complex technical projects in the clean power industry. Strong knowledge and appreciation of the technical, commercial, and political aspects driving the energy storage and renewables industry.

REQUIREMENTS
Education/Training
Bachelor’s degree in relevant discipline or similar degree/ experience required.

Experience
Minimum 5 years’ experience Energy Storage Service Operations with project planning, execution, and history of improvements.

POSITION REPORTS TO
Vice President Operations, VP Storage Business

CAREER PATH MOVES FROM THIS ROLE
Vice President Operations, VP Storage Business
Director, Quality & Operations Support

DESCRIPTION
Standardize and strengthen the company’s quality, environmental, and health & safety approach. Contribute to the quality culture throughout the company. Develop, document, and implement technical documentation, training programs and quality policies to facilitate continuous improvement and the development of a solid QHSE framework. Ensure that subject matter experts review the project specifications, engineering design, and OEM requirements and identify all Quality Control requirements. Train others and manage project QC inspections and documentation to verify compliance with construction or operations Quality Plan(s). Ensure that projects and processes are in line with statutory obligations.

KNOWLEDGE/SKILLS
Business development, site assessments and quality checks. Setting scopes and cost bases for service contracts. Optimizing Operation IT programs, managing and administering subcontractors and partner contractors, conducting investigations, analyzing and reporting findings. Developing and monitoring quality performance. Preventative and corrective action plans.

REQUIREMENTS
Education/Training
Bachelor’s degree required. Master’s degree is preferred.

Experience
10+ years’ of management experience.

POSITION REPORTS TO
Vice President Operations, VP Storage Business

CAREER PATH MOVES FROM THIS ROLE
Vice President Operations, VP Storage Business
Engineering Manager

DESCRIPTION
Provide engineering expertise and general support to the onsite operations and maintenance teams. Ensure there's a successful operations strategy. Implement processes and procedures. Lead and develop the engineering team to work on engineering solutions. Read and interpret documents such as operating and maintenance instructions, procedures manuals, blueprints and schematics. Write reports and correspondence. Solve complex problems in various situations. Make presentations to customers and at trade shows. Conduct root cause analysis and support troubleshooting, fault analysis and technical investigations. Lead development of upgrades. Ensure repairs are performed according to standards and procedures. Develop and implement strategic and tactical plans.

KNOWLEDGE/SKILLS
Engineering expertise. Implementing and advising on operations strategy. Implementing processes and procedures. Leading and developing people. Developing engineering solutions. Reading and interpreting documents such as operating and maintenance instructions, procedures manuals, blueprints and schematics. Writing reports and correspondence. Solving complex problems. Making presentations to customers and at trade shows. Conducting root cause analysis and technical investigations. Leading development of upgrades.

REQUIREMENTS
Education/Training
Bachelor’s degree in Electrical Engineering or related field.

Experience
Minimum of 3 years of storage technical experience. Collaboration with and leadership of other teams. Experience with various equipment manufacturers, platforms, systems and components. Experience with system design and development of upgrades.

Credentialing Required/Optional
PE (Professional Engineer) certification may be required.

POSITION REPORTS TO
Director of Operations

CAREER PATH MOVES FROM THIS ROLE
Director of Operations, Project Manager
Maintenance Manager

DESCRIPTION
This position may also be combined with Operations manager (See Operations Manager / O&M Manager). Oversee operations and staff. The primary objective is accountability for the safe and compliant operations of the utility scale Storage facility. Support the site / facility manager in operating the site. Develop strategy for improved maintenance diagnostics and operation. Lead and train more junior maintenance personnel. Interact with customers. Ensure all health and safety and operating procedures are followed.

KNOWLEDGE/SKILLS

REQUIREMENTS
Education/Training
Technical School Diploma preferred or equivalent combination of education and experience. High school diploma or GED required.

Experience
5+ years’ experience in the operation of Storage facilities, or 7 years of equivalent experience in instrumentation & controls, MV/HV Electrical work. Qualified to perform all routine and emergency operations at an electric generation facility and HV Switchyard. Experience with operations financial management, forecasting and controls preferred. Experience working with facility systems and computerized maintenance management systems (SAP).

Credentialing Required/Optional
"Journeyman" electrician preferred and NESC.

POSITION REPORTS TO
Maintenance Director, Storage Director, Facility Manager

CAREER PATH MOVES FROM THIS ROLE
Maintenance Director, Construction Manager, Facility Manager
Operations Manager
O&M Manager, Site Manager, Facility Manager—Storage

DESCRIPTION
Manage all storage operations day-to-day at the site for operations (and if job also includes, maintenance). Provide hands-on technical support and supervision for generation equipment and power delivery systems, as well as with other facility civil work, building maintenance, and upkeep. Work with engineering for diagnostics, and to ensure operations. Manage the monitoring of error codes and ensure reporting occurs. If job entails, manage schedule for maintenance and major repairs and ensure parts are ordered and coordinated. Ensure a positive working environment by maintaining discipline, morale, and employee relations. Set goals, prepare performance reviews, salary recommendations, and disciplinary recommendations. Manage the hiring and training of personnel on site. Meet or exceed production and financial targets. Work closely with asset management and accounting to manage P&L/budget, including planning, management and reporting.

KNOWLEDGE/SKILLS
Leadership & supervision in renewable energy, management and communication skills, organization, detail orientation, preparing budgets, keeping records, computer skills, renewable energy, storage operations, maintenance practices in renewable energy, mechanical and electrical troubleshooting and maintenance. Reading blueprints, schematics, and operating and maintenance manuals, as well as procedures. Ordering materials, tools & supplies.

REQUIREMENTS
Education/Training
BA/BS in engineering, business; related field or commensurate experience.

Experience
5 years’ Leadership and technical experience in the power generation, renewable energy industry, electrical marine lines, military operations or related fields. Experience with mechanical and electrical troubleshooting and maintenance.

POSITION REPORTS TO
Director O&M (Operations & Maintenance), Regional Operations Manager, Asset Manager/Director

CAREER PATH MOVES FROM THIS ROLE
Director O&M (Operations & Maintenance), Regional Operations Manager, Asset Director
Systems Engineering Manager

DESCRIPTION
Administer and support the storage technology infrastructure—installation, deployment, performance testing, upgrades, problem diagnosis, and troubleshooting. Support the computing, networking, and storage systems (electro-chemical, thermal and/or mechanical). Apply systems analysis techniques and procedures, including consulting with users / customers to determine hardware, software or system functional specifications. Design, develop, document, analyze, create, test, optimize or modify storage computer systems or programs, including prototypes, based on and related to user or system design specifications. Coordinate with vendors to resolve hardware and software problems. Lead storage related projects with internal and external representatives. Serve as subject matter expert for storage resources. Lead system design, facility integration, deployment, upgrades, issues resolution, and decommissioning. Manage a group of systems engineers.

KNOWLEDGE/SKILLS
Identifying requirements and matching to energy storage solutions; Installation, operation and maintenance of storage systems & facility, managing priorities and people, research and development

REQUIREMENTS

Education/Training
Bachelor’s degree in engineering, technical field, or storage system technology.

Experience
5+ years experience in renewable energy, preferrable energy storage technologies.

Credentialing Required/Optional
PE (Professional Engineer) a plus.

POSITION REPORTS TO
Energy Storage Solutions Director, Operations Manager or Director

CAREER PATH MOVES FROM THIS ROLE
Engineering Director, Operations Manager or Director, Project Manager
Commissioning Technician

DESCRIPTION
Work with team to perform required system inspections on utility energy storage facilities. Perform visual and mechanical inspections and electrical testing to specifications of construction documents, prior to the energization date. Document all inspection findings and test results, and communicate the findings and test results with Commissioning Lead. Document and assist with storage system troubleshooting and corrective actions. Oversee third party testing and inspections (Transformers, audits, cable tests, Fiber optics, etc.). Ensure site documentation is prepared for upcoming sites. Ensure proper use of PPE and conformity to safety procedures. Care for tools and report any missing or broken tools and needed supplies to Lead.

KNOWLEDGE/SKILLS
Storage systems, use of multi-meter, reading and using electrical single-line and three-line diagrams, safe work practices, visual and mechanical inspections and electrical testing.

REQUIREMENTS
Education/Training
HS Diploma or equivalent. Training in storage systems preferred.

Experience
Minimum 1 year storage installation experience.

POSITION REPORTS TO
Commissioning Manager

CAREER PATH MOVES FROM THIS ROLE
Commissioning Engineer
Site Surveyor

DESCRIPTION
Perform miscellaneous duties across the project to include surveying, quality control, and scheduling. Survey and inspect site readiness and capabilities for projects. Conduct land title surveys, topographic surveys, boundary surveys, and construction-staking and as-built surveys. Prepare legal descriptions. Coordinate with crews and technicians. Perform quality control of field activities, project deliverables and related calculations.

KNOWLEDGE/SKILLS
Surveying, Quality Control, Calculations/Math, GIS & mapping, LIDAR, Auto-CAD.

REQUIREMENTS
Education/Training
High School diploma; some positions may require Bachelor's degree.

Experience
2 years Surveying, Quality Control.

Credentialing Required/Optional
Licensed professional surveyor.

POSITION REPORTS TO
Engineering, Project Manager

CAREER PATH MOVES FROM THIS ROLE
Senior Surveyor
Buyer
Procurement Specialist, Procurement Associate

DESCRIPTION
Provide commercial support to pre & post award projects and report to the assigned Procurement Manager or Director of Procurement. Prepare and issue RFP equipment packages to suppliers. Work with engineering to answer RFP questions. Receive and evaluate proposals. Negotiate pricing with suppliers. Work closely with engineering project management, scheduling, legal and insurance. Secure completed purchase requisition and purchase terms and conditions, and confirm final purchase order. Monitor, support and administer all issued purchase orders. Manage stakeholder & supplier interaction. Assist in schedule development for project proposals. Assist estimating with equipment scope and price.

KNOWLEDGE/SKILLS

REQUIREMENTS
Education/Training
4-year college degree in business field or combination of education and experience. Additional financial, business or legal degree and additional storage training needed for advancement.

Experience
Minimum 3 years' experience in procurement (preferably with engineering or construction industries).

POSITION REPORTS TO
Senior Buyer or Procurement Manager or Director

CAREER PATH MOVES FROM THIS ROLE
Senior Buyer, Procurement Manager or Director
Construction Manager

**DESCRIPTION**
Responsible for directing, planning, and managing Storage construction project(s) on jobsite. Oversee all construction contracts within area of responsibility, and supported by Site Teams. Monitor and oversee construction activities and personnel. Keep Superintendent II and Construction Manager II informed of overall construction activity progress and performance. Monitor and review construction performance indicators. Manage construction package elements of procurement process. Follow all health and safety procedures.

**KNOWLEDGE/SKILLS**
Business development, Storage systems, estimating, construction management, electrical systems and SCADA, planning, procurement, health & safety, MS Office, reading and interpreting blueprints, procedures, government regulations, presentations to management and public groups, writing reports, managing construction crew, interpreting technical instructions using math, algebra & geometry.

**REQUIREMENTS**

**Education/Training**
Bachelor's degree (BS) in Construction management, engineering or related field; equivalent combination of education and experience.

**Experience**
Three years of construction industry experience / knowledge of construction techniques, estimating and construction management.

**POSITION REPORTS TO**
Project Manager or Director of Storage Projects

**CAREER PATH MOVES FROM THIS ROLE**
Construction Manager II or Project Manager or Superintendent
Construction Manager II

DESCRIPTION
Responsible for directing, planning, and managing Storage construction project(s) on jobsite. Oversee all construction contracts within area of responsibility, and supported by Site Teams. Monitor and oversee construction activities and personnel. Keep Superintendent II and Construction Manager II informed of overall construction activity progress and performance. Monitor and review construction performance indicators. Manage construction package elements of procurement process. Follow all health and safety procedures.

KNOWLEDGE/SKILLS
Business development, Storage systems, estimating, construction management, electrical systems and SCADA, planning, procurement, health & safety, MS Office, reading and interpreting blueprints, procedures, government regulations, presentations to management and public groups, writing reports, interpreting technical instructions using math, algebra & geometry.

REQUIREMENTS
Education/Training
Bachelor’s degree (BS) in Construction management, engineering or related field; equivalent combination of education and experience.

Experience
Five years in a supervisory role of construction industry including construction techniques, estimating and construction management.

POSITION REPORTS TO
Project Manager or Director of Storage Projects

CAREER PATH MOVES FROM THIS ROLE
Construction Manager III or Project Manager or Superintendent
Journeyman Electrician

DESCRIPTION
Responsible for installing, maintaining, and repairing electrical wiring, equipment, fixtures and ensuring that work is in accordance with relevant codes. Ensure the proper functioning of all electrical units and components. Complete scheduled checks to spot malfunctions. Use electrical testing and repair equipment. Maintain records of all electrical inventories and place orders for spare parts and equipment. Maintain a log of electrical repair and maintenance works. Journeyman Electricians may supervise Apprentice Electricians.

KNOWLEDGE/SKILLS
Long-term on the job training. Repair or replace complex electrical lines and equipment. Electrical systems and the appropriate tools needed to fix and maintain them. Troubleshooting skills—must diagnose problems in increasingly complex electrical systems. Able to lift heavy tools, cables, and equipment on a regular basis.

REQUIREMENTS
Education/Training
Bachelor’s degree or an Associate’s degree or diploma in electrical engineering, mechanical engineering or related field.

Experience
4+ years working as an electrician

Credentialing Required/Optional
"Journeyman“ electrical license

POSITION REPORTS TO
Construction Manager, Project Manager, Electrician Supervisor or Manager

CAREER PATH MOVES FROM THIS ROLE
Electrician Supervisor or Manager
Optimization Engineer

**DESCRIPTION**
Support production and design optimization throughout development process, and mid to late stage projects. Help to assess early stage design trade-offs for site specific and regional factors (e.g. equipment, land cost). Lead cross-functional optimization efforts. Review technical requirements to guide negotiation and project risks. Identify production and design levers to quantify risk and opportunities on project development and profitability. Work on LCOE (Levelized Cost of Energy) initiatives around design configuration land utilization, equipment. Analyze data during commissioning and support performance testing activities.

**KNOWLEDGE/SKILLS**
LCOE (Levelized cost of energy), engineering calculations, analyzing equipment performance, analyzing energy storage optimization, quantifying risk and opportunities around unknowns in design and technology.

**REQUIREMENTS**

**Education/Training**
Bachelor’s degree in engineering or technical discipline.

**Experience**
3+ years in renewable energy optimization. Data analytics and statistics, building models. Experience working with large data sets, conducting root cause analyses, and visualizing data in a variety of trends.

**Credentialing Required/Optional**
PE (Professional Engineer) ideally.

**POSITION REPORTS TO**
Energy Development Manager or Director, Engineering Manager or Director.

**CAREER PATH MOVES FROM THIS ROLE**
Engineering Manager or Director, Project Manager.
Commissioning Manager

**DESCRIPTION**
Oversee regional installation and commissioning operations from the Storage project kickoff through customer acceptance. Responsible for planning, checking, quality assurance, monitoring, evaluation, and preparation of commissioning reports to management. Staff, train, and manage Storage commissioning team personnel. Create guidelines and procedures to ensure all project activities are completed according to a standard process, project plan and budget. Conduct routine audits as necessary. Interact with engineering to troubleshoot any technical issues. Manage budgets.

**KNOWLEDGE/SKILLS**
Electrical and mechanical theory. Team supervision. Budgeting procedures. Commissioning operations and practices for Storage projects. Interpret engineering drawings.

**REQUIREMENTS**

**Education/Training**
Bachelor’s degree in electrical engineering, electronics engineering or technical related field and five to seven years of experience.

**Experience**
5-7 years experience with power generation equipment and commissioning procedures. Construction and commissioning experience in structural assembly, electrical protection and control systems related to the site work.

**Credentialing Required/Optional**
Optional: REP- Renewable Energy Professional” and “Certified Energy Manager” from the Association of Energy Engineers (aeecenter.org)

**POSITION REPORTS TO**
Director, Storage Commissioning;
Director, Storage

**CAREER PATH MOVES FROM THIS ROLE**
Project Manager—Commissioning,
Director, Storage Commissioning
Construction Manager III

DESCRIPTION
Responsible for directing, planning, and managing Storage construction project(s) on jobsite from inception to completion. Responsible for overall direction and evaluation. Oversee all construction contracts within area of responsibility, and supported by Site Teams. Monitor and oversee construction activities and personnel. Keep Superintendent II and Construction Manager II informed of overall construction activity progress and performance. Monitor and review construction performance indicators. Manage construction package elements of procurement process. Follow all health and safety procedures.

KNOWLEDGE/SKILLS
Business development, Storage systems, estimating, construction management, electrical systems and SCADA, planning, procurement, health & safety, MS Office, reading and interpreting blueprints, procedures, government regulations, presentations to management and public groups, writing reports, interpreting technical instructions using math, algebra & geometry, Supervising construction crew, construction tools, machinery methods & procedures, forecasting for projects.

REQUIREMENTS
Education/Training
Bachelor’s degree (BS) in Construction management, engineering or related field; equivalent combination of education and experience.

Experience
Seven years in a supervisory role of construction industry including construction techniques, estimating and construction management.

POSITION REPORTS TO
Project Manager or Director of Storage Projects

CAREER PATH MOVES FROM THIS ROLE
Director of Storage Projects
Project Manager

DESCRIPTION
Lead project team. Develop scope of project, specifications for procurement and installation of the storage project, and project timelines. Coordinate interconnection process. Manage subcontractors, technical consultants, designers and engineers. Develop and maintain file management, organize data collection and track progress toward project objectives. Serve as the lead on-site manager during the development of the project into the operation phase of the project. Develop procedures and work instructions. Oversee EHS protocols.

KNOWLEDGE/SKILLS
Energy systems, storage systems; Collecting / organizing and analyzing data from energy project, Team leadership, Project management, Writing reports

REQUIREMENTS

Education/Training
Bachelor’s degree in related area—project management, engineering, design, construction

Experience
Depending on level, 1-2 years of experience (with a bachelor’s degree) OR 5-6 years of experience. Leading projects from start to finish

Credentialing Required/Optional
PMP (Project Management Professional) desired; potential Engineering certification or license depending on project requirements

POSITION REPORTS TO
Director of Storage Operations or Engineering or Construction

CAREER PATH MOVES FROM THIS ROLE
Director of Storage Operations or Engineering or Construction or Project Manager on other green energy systems (i.e. Solar)
Technical Trainer
Technical Instructor

DESCRIPTION
Educate employees about energy storage in various technical topic areas related to processes, equipment, environment, resources, etc. Facilitate classroom training and on the job coaching for businesses, colleges or learning providers. Continue to develop knowledge regarding changes and industry updates, and update training to reflect this. Use field experience to provide real-life scenarios and discussion. Develop training programs, guides, assignments and skill assessments/evaluations. Instruct training and conduct demonstrations on equipment. Supervise trainees in the safe use of equipment and walk-through of procedures. Assess skills, evaluate performance and monitor trainee progress. If applicable, develop relationships with other businesses to provide training experiences for students.

KNOWLEDGE/SKILLS
Training & communicating on technical topics. Developing training curriculum. Writing procedures and instructions. Creating successful learning environments, and developing variety of methods of teaching topics so students can learn in ways that work for them. Developing and using JPM’s (job performance measures). Evaluating / assessing skills.

REQUIREMENTS
Education/Training
Bachelor’s degree preferred, but may not be required.

Experience
Minimum 2 years in the topic area in which Trainer will be providing training.

Credentialing Required/Optional
Requirements for licensing and certification vary by state.

POSITION REPORTS TO
Training Manager

CAREER PATH MOVES FROM THIS ROLE
Training Manager, Operations Manager
**Training & Development Manager**

**DESCRIPTION**
Strategically manage all elements of the company’s technical and non-technical training programs. Define the training requirements for each staff position and oversee a system of online, classroom and OJT training using a network of trainers. Track progress in the company’s online Learning Management System (LMS). Generate new course content and modify existing courses for changes and updates needed. Work collaboratively with trainers and operations. Manage employee development and new hire orientation. Plan (with organizational leaders), develop, and facilitate or procure training and staff development programs that meet the needs of the organization. Proactively manage all aspects of T&D program delivery from start to finish, including content creation, instructor coordination, project planning, and logistics. Monitor training for effectiveness. Coach leaders in skill assessment and performance evaluation. Develop testing / assessment tools and procedures. Support continuous improvement. Manage training materials, supplies & the training budget.

**KNOWLEDGE/SKILLS**

**REQUIREMENTS**

**Education/Training**
Generally bachelor’s degree desired; Master’s degree preferred.

**Experience**
5 years’ experience in similar role or combination of knowledge and experience in leading training efforts.

**POSITION REPORTS TO**
Director of Operations, Human Resources Director

**CAREER PATH MOVES FROM THIS ROLE**
Director of Operations, Project Manager, Human Resources Director
